

SLIME

Ingredients

- 250ml of PVA Glue
- 1 – 2 drops of food colouring (optional)
- ¼ cup of glitter
- 1 teaspoon of baking soda
- 2 – 3 tablespoons of saline solution (contact lens solution)

What To Do

1. Pour the glue into a medium bowl. Stir in the food colouring and glitter, if desired.
2. Add the baking soda to the glue mixture and stir until smooth.
3. Pour in 2 tablespoons of the contact lens solution and stir slowly. The mixture should begin to harden, becoming stringy.
4. Continue mixing slowly until a ball of slime forms.
5. Pick up the slime and work between your two hands, until smooth. If the slime is particularly slimy, work in another ½ tablespoon of contact lens solution as needed.
